

Code Review Procedures

The class is divided into two groups: group A and group B. Each group gets slightly different homework assignments. Students are paired-up with one person from group A and one from group B. They are code review partners.

Getting a Code Review

When a student has a draft version of their homework ready, they send it to their code review partner. Their partner checks their work and sends back a code review form with the first column (the "beta" column) completed.

What to Do with the Code Review You Get

After getting a review, a student will revise their lab work and then complete the second column ("release" column) of the review form. The student will upload their revised work along with copies of the review forms for both the review they gave and the review they got.

What to Do If Your Code Review Partner Doesn't Do Their Part

If a student's code review partner doesn't send them code to review, they can just review their own and put a note in the comments that their code review partner didn't send them anything to review by the deadline (the deadline is listed on the main Moodle page).

If a student's code review partner didn't give them a review, they can just fill out the second column of the form for their own code and put a note in the comments section saying their partner didn't give them a review by the deadline.
